Abstract:

The focus of this research is the analysis and evaluation of issues relevant to the programming and design of an automobile service centre in Abeokuta, Ogun State. The method used included a literature search and a field survey and evaluation of some existing automobile service centres in Nigeria. The function of the service centre includes the servicing and repair of automobile and the training of staff. The spatial requirements of the centre are determined by sizes of equipment, the operational processes of service and repair, and the convenience of workers. A design for a service centre at Abeokuta was proposed.

Keywords: Automobile service centre
